

HOW TO PLAY ELECTRONIC BLACKJACK

Cards:

2 through 10 are worth their face value.

Kings, Queens, and Jacks are each worth 10, and Aces may be used as either 1 or 11.

Playing the Game:

The object for the player is to beat the dealer total by drawing cards totaling as close to 21 without going over. Play begins when you place a bet by stacking an electronic chip or chips in the betting circle on the screen directly in front of you. After all bets have been placed, each player and the dealer are given two cards. All player cards are dealt face up. One of the dealer's two cards is dealt face up so the all players at the table can see it.

Results:

Once the cards have been dealt, players decide how to play out their hands (Hit, Stand, Split, Double Down, etc).

After all players have finished their turns, the dealer plays according to set rules that may differ from table to table: The dealer must draw more cards to any total of 16 or less and in some games the dealer will also draw to "soft" 17. The player's hand and the dealer's hand are then compared to determine winning or losing wagers.

If the dealer goes over 21 or "Busts" the player wins if their hand is 21 or less. Similarly, if the player goes over 21, they bust and lose the hand.
